**Come to Med-e-Tel for products  
for services  
for guidance  
for information  
to meet with colleagues from around the world!**

- Do you want your hospital to become paperless?
- Are you planning to implement a national Telemedicine program?
- Want to find information about the latest developments in the field?
- Looking for products to distribute in your marketplace?
- Want to use your nursing staff more efficiently, have them make less home visits and yet increase the overall quality and efficiency of your home care service?
- Do you want to provide your patients with professional second opinions from other locations around the world?
- Looking to modernize your practice and patient record systems?
- Are you looking for information on Telemedicine and eHealth courses? Or for eLearning opportunities?
- Want to meet with colleagues to exchange ideas and discuss visions for the future?
- Want to find out about products and services that can make your professional activities more efficient and effective?
- Is your national health system ready to face tomorrow's health and social care challenges?
- How will eHealth/Telemedicine affect my business?

Stepping away from your daily activities for just a few days and attending Med-e-Tel will provide you with an opportunity to obtain practical and concrete answers and solutions to these and many other questions, and will help you to build a bright future for your business, your healthcare practice, your organization or your regional or national healthcare system.

For a review of past Med-e-Tel programs, [click here](#). Med-e-Tel 2016 conference program details will be available [here](#) towards early 2016.

The Luxembourg *Agence eSanté* (Luxembourg's National eHealth Agency) will also bring together once again a partner pavilion in the Med-e-Tel expo area and showcase local and regional developments together with industry and institutional partners. It is your chance to meet with local technology companies and healthcare providers. The Agency will also run several sessions and panel discussions on interoperability and on data storage and exchange.
